

## International Journal of Engineering Sciences Paradigms and Researches

### IJESPR Impact Factor Report

Our Impact Factor (IF) has been calculated by information obtained from citation report released by **Universal Group of Quality Research (UGQR)**.

For understanding purposes, we have presented a detailed calculation of the IF:  
Citations count of articles published in earlier years and up-to evaluation month = x  
Number of articles published in earlier years and up-to evaluation month = y

$$\text{Impact Factor (IF)} = x/y = 2.80$$

### Some of the Most Cited Articles

Articles	Citation Count
Analysis of Brain Cancer and Nervous Cancer Population with Age and Brain Cancer Type in North America	93
Ajax Complexity	88
Modeling Speaker Specific Features for Automatic Text	19
Artificial Immune Systems	16
Information Technology In Tourism Industry - What More Needed?	17

### Information about the IF accuracy

The citation values reported have been retrieved from citation report released by **Universal Group of Quality Research**. There might be a few superfluous as well as a few missing citations that UGQR could not capture. However, we believe that the reported information is to our knowledge as accurate as possible.
